

AMIR SIDDIQUI

Senior Frontend Engineer

+91 8791986707 amirsiddiqui.in@gmail.com linkedin.com/in/amirsiddiquiin github.com/amirsiddiquiin amirsiddiqui.in

EDUCATION

Aligarh Muslim University

Master of Computer Applications (MCA)

Aligarh, India

2019 - 2022

Aligarh Muslim University

B.Sc. in Statistics

Aligarh, India

2016 - 2019

EXPERIENCE

Alloc8

Senior Frontend Engineer

Remote, United States

03/2024 - Present

- Architected and shipped the end-to-end swap interface on top of the Uniswap V3 SDK, delivering production-grade price quoting, slippage tolerance, gas estimation, and transaction confirmation flows across multiple EVM networks.
- Designed and implemented ZapIn and ZapOut functionality enabling single-click entry and exit into any liquidity position, abstracting complex multi-step smart contract interactions behind a unified frontend interface.
- Built the auto-rebalancing dashboard rendering real-time tick data, fee tier analytics, and position health metrics; engineered the alerting layer surfacing actionable signals when positions drift out of configured price ranges.
- Developed the rewards and claim subsystem aggregating accrued protocol fees across all active user positions into a single transaction flow, with live balance updates and resilient retry handling.
- Leveraged the OpenAI SDK and structured prompt engineering to build AI-assisted automation features generating machine-parsable strategy outputs that power the platform's core agent-driven DeFi workflows.
- Served as sole frontend engineer across 3 major product releases; led adoption of a unified component library (Tailwind CSS + Shadcn/UI) and reduced user onboarding friction by 60% through redesigned flows.

MagpieXYZ

Frontend Engineer

Remote, Tortola, British Virgin Islands

03/2022 - 03/2024

- Architected and built the frontend from the ground up for a data-intensive cross-chain dashboard serving 5,000+ monthly active users, using React.js, Next.js, and Redux Toolkit with a modular, scalable component architecture.
- Engineered resilient data layers consuming REST APIs and GraphQL endpoints across a microservices backend, implementing optimistic updates, granular error boundaries, and skeleton loading states for a fault-tolerant UX.
- Collaborated with designers and product on a complete landing page redesign, lifting conversion rate by 15% within 60 days through iterative improvements to layout, copy, and Core Web Vitals performance.
- Enforced WCAG accessibility standards and cross-browser compatibility across Chrome, Firefox, Safari, and Edge for all platform surfaces, embedding a11y checks into the development workflow.

PolkaBridge

Frontend Engineer

Remote, Singapore

06/2022 - 02/2023

- Delivered pixel-perfect, fully responsive UI for a high-traffic DeFi platform serving 50,000+ concurrent users, featuring real-time on-chain dashboards powered by WebSocket data feeds and reactive state management.
- Reduced JavaScript bundle size by 40% through Webpack code splitting, dynamic imports, and aggressive tree shaking, directly improving Time to Interactive and Lighthouse performance scores across the platform.
- Implemented frontend security best practices including input sanitization, CSP headers, and safe handling of wallet addresses and transaction payloads to mitigate XSS and injection risks.

SKILLS

Languages & Frameworks: JavaScript (ES6+), TypeScript, HTML5, CSS3, React.js, Next.js, Tailwind CSS, Material UI, Shadcn/UI, GSAP, Framer Motion

State, APIs & Web3: Redux Toolkit, Zustand, Context API, React Query, REST APIs, GraphQL, WebSockets, Uniswap V3 SDK, Ethers.js, Wagmi, RainbowKit, wallet integrations

Performance, Testing & Accessibility: Core Web Vitals, SSR/SSG, Code Splitting, Lazy Loading, PWA, WCAG / a11y, Jest, React Testing Library, Postman, Tenderly

Tooling & Infrastructure: Git, GitHub, Webpack, Vite, Vercel, CI/CD, AWS API Gateway, AWS CloudWatch, Jira, Figma, OpenAI SDK, Prompt Engineering, Google Analytics, Mixpanel

PERSONAL PROJECT

Flow3 — EthIndia 2024 Winning Project.

- Built Flow3, the winning project at EthIndia 2024 (India's largest Web3 hackathon), delivering a full-stack dApp with a React.js + Next.js frontend integrated against on-chain smart contracts via Ethers.js and Wagmi.
- Architected wallet integration and transaction confirmation flows with real-time on-chain state synchronization, optimistic UI updates, and resilient error handling for failed or reverted transactions.
- Designed and shipped the production frontend within hackathon timeline, balancing rapid iteration with code quality, type safety, and a polished, demo-ready user experience.

ACHIEVEMENTS

- EthIndia Hackathon Winner (2024)** — Flow3 Project, winner at India's largest Web3 hackathon.
- 1st Prize, 1Inch Award — EthIndia (2023)** — Awarded among 2,000+ participants for DeFi tooling innovation.
- Performance Award — Alloc8** — Recognized for shipping the V1 automation engine ahead of schedule.
- 4 STAR Coder on CodeChef** — Achieved 4-star rating through consistent competitive programming performance.
- Knight on LeetCode** — Earned the Knight badge for high contest rating on LeetCode.
