Mar 2024 – Present

- Own end-to-end DeFi product workflows across Next.js, external APIs, and smart contracts — quoting, slippage, gas estimation, transaction execution, and confirmation across EVM networks.
- Designed ZapIn/ZapOut and automated liquidity workflows that coordinate multi-step contract interactions behind a single user action, with resilient error handling and live state sync.
- Built real-time position monitoring and auto-rebalancing using tick data, fee analytics, and health-signal alerting for out-of-range liquidity positions.
- Integrated the OpenAI SDK with structured prompting to generate machine-parseable strategy outputs powering agent-driven automation in production.
- Led 3 major product releases and standardized the UI platform on Tailwind CSS + Shadcn/UI, cutting onboarding friction by 60%.

Full Stack Engineer | MagpieXYZ
